**Why Patterns Exists?**

# Why Patterns Exists?

- Someone already thought about that.

# Why Patterns Exists?

- Someone already thought about that.
- Like any other knowledge, it's intended to evolve and cary years of research and test.

**So why are they a bad thing?**

So ~~why~~ **when** are they a bad thing?

***When you start trusting them so blindly that you forget to think.***

**KEEP  
CALM  
AND  
FUCK  
STATUS QUO**

**Give me some examples, Bitch!**

# 1 - ~~Fuck Peter Chen~~ Database Normalization

That includes using SQL for everything.

# 1 - ~~Fuck Peter Chen~~ Database Normalization

That includes using SQL for everything.

## Why?

- I/O Performance.
- Crazy Scalability.

# 1 - ~~Fuck Peter Chen~~ Database Normalization

That includes using SQL for everything.

## How?

- Collections, alone, solve most of the problems.
- Let Database handle only what you can't.

## **2 - Fuck ~~College~~ Education.**

Why pay for something you can get for free?

## 2 - Fuck ~~College~~ Education.

Why pay for something you can get for free?

### Reasons:

- Anything CS related is freely available online.
- No grades, means no pressure.
- Focus on what you really wanna learn.

## **2 - Fuck ~~College~~ Education.**

**Biggest Reason:**

- The market does not give a fuck.**

## **3 - Ignore Design Patterns and Abuse Anti-Patterns**

But do so with extremely caution.

## **3 - Ignore Design Patterns and Abuse Anti-Patterns**

### **Why?**

- Sometimes, you just gotta Deliver.

## 4 - Avoid the Hype

Cause Angular 4.0 is on it's way and you haven't figured out how AngularJS 1.0 works yet.

## **5 - MVP means MVP. It does not need to be good.**

Cause there's nothing worse than over-architect a no-users app.

## **6 - Fuck Stability! Quit your Job, Now.**

I'm serious, text you boss right now and let him know you're not gonna work tomorrow.

## 6 - Fuck Stability! Quit your Job, Now.

### Why?

- You're not gonna be rich there.
- You're not having enough challenges to shapen your mind.
- You co-workers are idiots.
- The coffee sucks.
- The code sucks even more than the coffe.

## 6 - Fuck Stability! Quite your Job, Now.

### Why?

- Make sure you have some money stash (make one if you don't).
- Get some friends and create an awesome SaaS.
- If you don't wanna build something, at least work remotely, your wife is gonna love! (or hate, both way better know).
- If everything fails, get another job.
- Start again on the previous slide tips.

## **7 - Quit Working. P-e-r-i-o-d.**

Start thinking. It's really, really fun.

## **7 - Quit Working. P-e-r-i-o-d.**

Start thinking. It's really, really fun.

### **Why?**

- The more you work, the less you get done.

# 7 - Quit Working. P-e-r-i-o-d.

Start thinking. It's really, really fun.

## How?

- Put your mind at automation.
- Put your mind at creation.
- Put your mind at design.
- Put your mind at architecture.

## 8 - LESS Friends, MORE Enemies.

*"We are the average of the five people we spend the most time with" - Jim Rohn*

## 8 - LESS Friends, MORE Enemies.

*"We are the average of the five people we spend the most time with" - Jim Rohn*

### How?

- Keep only friends who have something to offer you.
- Enemies and/or rivals are the ultimate source of ideas.

## 9 - Pursue **Success** at **Any Cost**

What's your legacy?

## 9 - Pursue **Success** at **Any Cost**

What's your legacy?

- self note: tell Erich Thomas history that does not fit into a slide.

# **10 - Learn the Fucking Javascript**

Master it. You already need it. You just don't know yet.

**That's all folks!**

**You can cry now.**

**Get you there and Fuck it!**
